

Grypho5 Managed Backup Service

*Managed Backup and Storage for Security,
Resilience & Immutability*

Data IS Your Business—Protect It with the Most Exhaustive Managed Backup Service Available

If targeted by a threat actor, would your backups survive? The numbers are against you—while most organizations believe their backups are immutable, statistics show that threat actors target backups in 93% of attacks and are successful in destroying critical data at least 68% of the time. You can't operate without your data, so don't take chances.

Grypho5 offers the industry's most exhaustive Managed Backup Service, providing overlapping layers of security, redundancy, and immutability (including snapshots, onsite, and offsite versions of your data), so your organization can survive even the most determined attack. And we will deploy, configure, manage, and continually monitor your solution to ensure it is always providing maximum defenses for *all* your enterprise data. With proprietary threat data from our sister company, Fenix24 (which is on the front lines of attack remediation daily) your backup strategy will always be timely, even in the face of continuously shifting threat actor tactics. We will work to ensure that your data, including at the infrastructure/service layer, is resilient and ready to restore 24/7/365.

Key Service Features:

- Provides a backup solution that is proven resilient in a threat actor scenario, continuously hardened to eliminate vulnerabilities, and scales to meet your growth needs.
- Performs continuous management, configuration, and optimization of the solution.
- Monitors and manages tasks, performance, recoverability, immutability, and redundancy.
- Remediates issues as needed to continually secure your backups.
- Gives you peace of mind that, should the worst occur, your data is recoverable.

Key Deliverables:

- Selection, deployment, and configuration of your backup solution.
- Provisioning of three backup repositories: local appliance, public cloud repository, and private cloud repository.
- End-to-end management of your data protection solution:
 - Analyzing it for best practices, policy adherence, availability, user access, and restorability.
 - Monitoring scheduled and daily backups, ensuring all enterprise data is backed up, immutable, and recoverable.
 - Performing audits, reporting, telemetry, testing, and troubleshooting as needed.
- Technical relationship management: providing you with regular business reviews on solution health, RTO/RPO adherence, and policy configuration.
- Quarterly backup assessment to give you a full view of your backup strategy, data sources, policies, and rate-of-change strategy.

Why Grypho5

GRYPHO5, part of the Conversant Group family of companies, understands that your IT team has a lot of demands. So, we partner with you, filling your unique gaps to help keep you secure every day of the year. Armed with proprietary threat actor playbooks, we can defend your infrastructure dynamically, leaving you to focus on other priorities.
